

William's Update

Remittances

William Clinton Co

September 18, 2025

Abstract

This document is a follow-up to the meeting on September 29th and addresses the items discussed during that meeting. This provides an update on who was contacted regarding the remittance datasets, offers updates on previously problematic pdf file links, and clarifies how the stablecoin/bitcoin cross-border flows dataset works. Most importantly, this presents the extracted remittance data from Remitscope.

4.1.1	Receiving Countries Analysis	7
4.1.2	Receiving Countries Analysis	11
4.2	Data Concentration	13
4.3	Main Flows	13

1 Introduction

I have merged Kpodar's dataset with the Remitscope dataset. The following sections present visualizations that highlight the results of this combined analysis.

Current efforts are focused on reviewing additional papers to identify more remittance data. It may also be worthwhile to focus on individual countries, such as Georgia or the Philippines, to obtain more complete datasets.

Data Collection Insights:

Most central banks provide remittance data for the most recent years. For example, if data is collected in 2024, the available range is typically 2019–2024. If collected in 2018, the range would be 2014–2018. This pattern is consistent across most sources I have reviewed.

I also focusing efforts on studying other papers for similar datasets that did not use population thresholds.

Remittance Data Construction:

Additionally, the Kpodar dataset provides a more detailed disaggregation of remittances by these metrics. I mention it here for reference, if it may be of interest for further analysis.

Total remittances received should be calculated as the sum of personal transfers (`personalcr_usd`) and compensation of employees (`compocr_usd`). For countries lacking personal transfer data, workers' remittances (`workocr_usd`) can be used as a substitute. In the corridor data, remittances are already aggregated.

2 Data Update

I have contacted the authors from [Defying the Odds: Remittances During the COVID-19 Pandemic](#)

- The Remitscope data is reliable but incomplete
- [Defying the Odds: Remittances During the COVID-19 Pandemic](#) provides additional data to the Remitscope data.

The complete merged dataset is available here: [Code/14.csv](#)

3 Data Analysis Results

3.1 Overview

This analysis examines remittance flows using data extracted from Remitscope, and shows how the remitscope dataset changes upon the addition of Kpodars data

3.1.1 Data Completeness Summary

Data Completeness Summary - **Total records:** 728 → 3980 - **Date range:** 2019–2024 → 2018–2024 - **Sending countries:** 206 → 257 - **Receiving countries:** 20 (10.3% of world) → 214

3.2 Interactive Visualizations

3.3 Sending Countries Analysis

The remittance data shows a global distribution of sending countries, with developed nations dominating the top positions:

3.3.1 Top 10 Sending Countries

Sending Country (Remitscope)	Records	→	Sending Country (Merged)	Records
Canada	18	→	Georgia	641
Italy	15	→	Philippines	597
United States of America	15	→	Pakistan	81
Spain	14	→	Brazil	75
France	14	→	Cabo Verde	62
Germany	14	→	Jamaica	54
United Kingdom	12	→	Suriname	51
China	11	→	United States	47
Sweden	10	→	Dominican Republic	47
Switzerland	10	→	Haiti	45

3.4 Receiving Countries Analysis

The receiving countries show a strong concentration in Latin America:

3.4.1 Top 10 Receiving Countries

Receiving Country (Remitscope)	Records	→	Receiving Country (Merged)	Records
Ecuador	183	→	Georgia	639
Mexico	169	→	Philippines	594
Panama	102	→	Ecuador	189
Senegal	38	→	Mexico	178
Kenya	34	→	Panama	114
Colombia	32	→	Brazil	78
Uganda	20	→	Pakistan	78
Chile	19	→	Jamaica	65
Morocco	19	→	Cabo Verde	60
Ethiopia	17	→	Suriname	57

3.5 Temporal Distribution

The data collection shows significant variation across years:

3.5.1 Records by Year

Figure 1: Records by Year

Note: 2023 data is completely missing from the dataset.

The dataset distribution by year after including Kpodar's data is shown below:

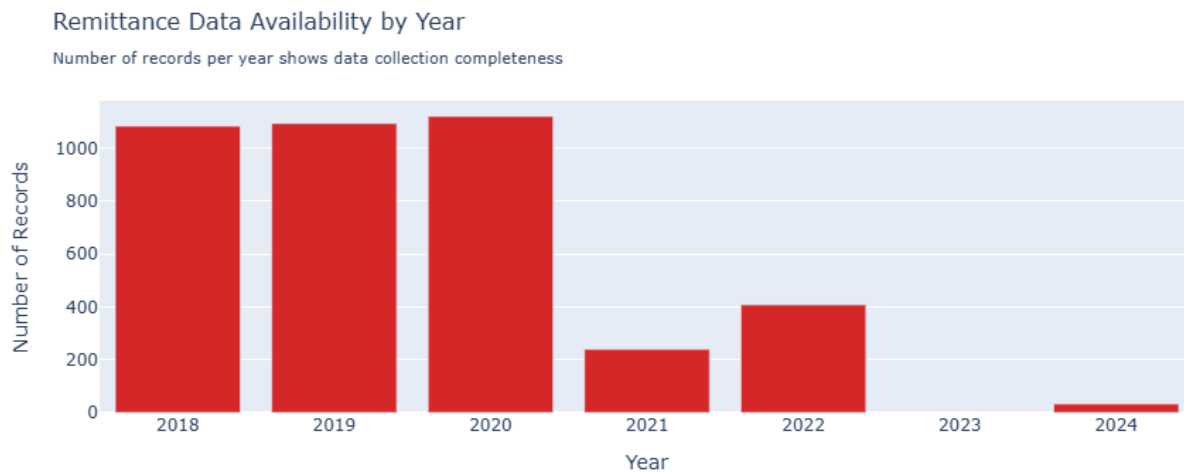

Figure 2: Data Distribution by Year (Merged Dataset)

3.6 Key Findings

- Kpodar's dataset is significantly more than Remitscope dataset. Though this is attributed mainly to 2 countries Georgia and Philippines, more details shown below.
- **Peak Collection:** 2022 shows the highest data collection with 408 records

4 Visual Analysis

4.1 Sending Countries Analysis

Remittance Data Availability: SENDING Countries

Number of remittance records by sending country

		Year			

top 30 sending countries Remitscope and Kpodar

4.1.1 Receiving Countries Analysis

Remittance Data Availability: RECEIVING Countries

Number of remittance records by receiving country

Figure 5: Remitscope Recieving Countries Map

The receiving countries exhibit a strong concentration in Latin America, with Ecuador (183 records) and Mexico (169 records) leading the original dataset.

Remittance Data Availability: RECEIVING Countries

Number of remittance records by receiving country

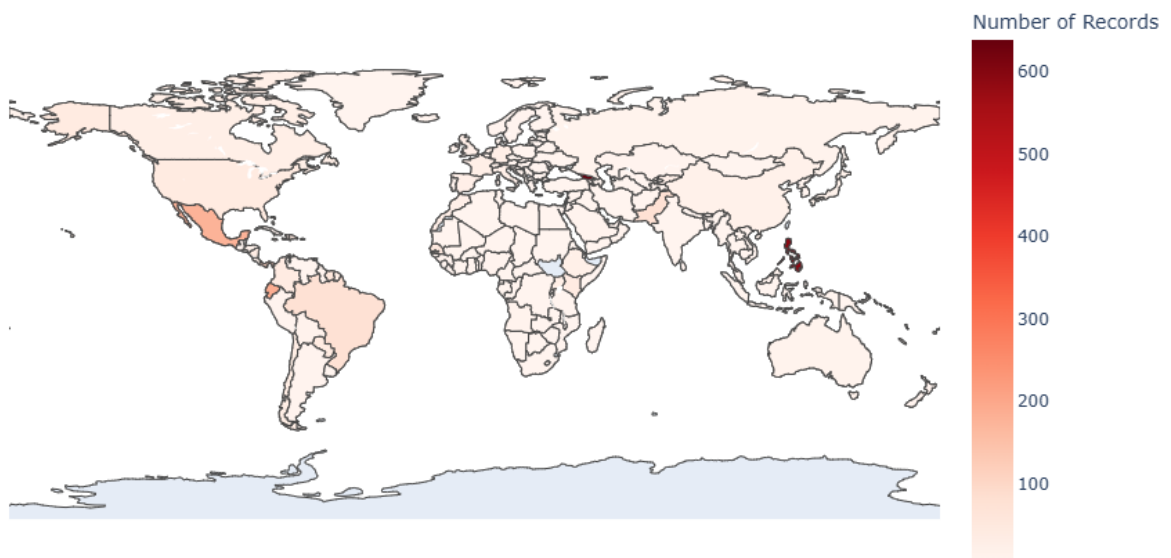

Figure 6: Remitscope and Kpodar Receiving Countries Map

Figure 7: top 30 receiving countries Remitscope and Kpodar

Top 30 Sending Countries:

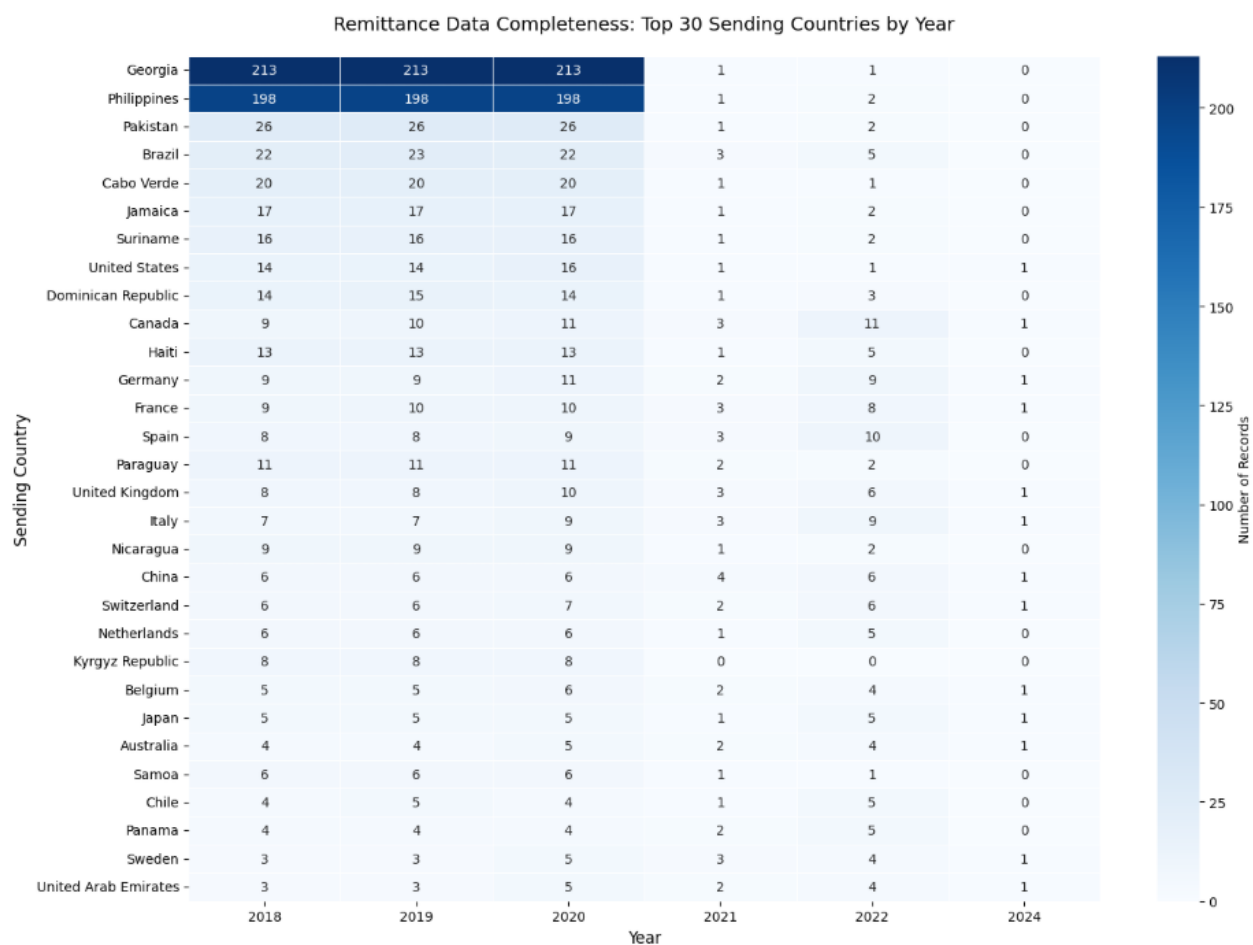

Figure 8: Top 30 Sending Countries: Remitscope and Kpodar

The cross-tabulation heatmap below shows that Georgia and the Philippines dominate the observations. This is likely due to the extensive information provided by their central banks.

4.1.2 Receiving Countries Analysis

Remittance Data Availability: RECEIVING Countries

Number of remittance records by receiving country

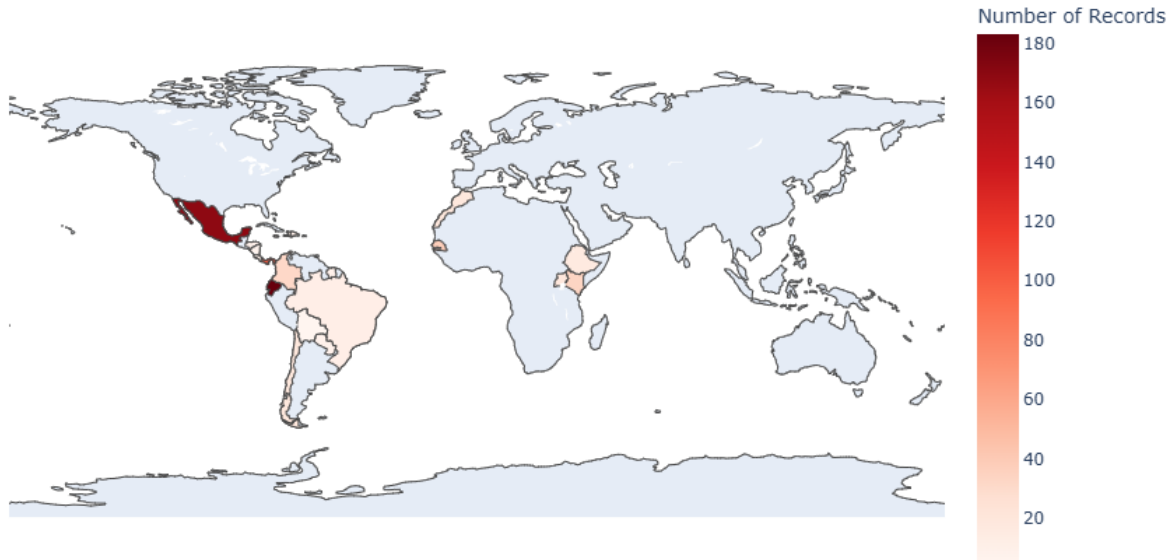

Figure 9: Remitscope Receiving Countries Map

The receiving countries are heavily concentrated in Latin America in the original dataset, with Ecuador (183 records) and Mexico (169 records) as the primary recipients.

Remittance Data Availability: RECEIVING Countries

Number of remittance records by receiving country

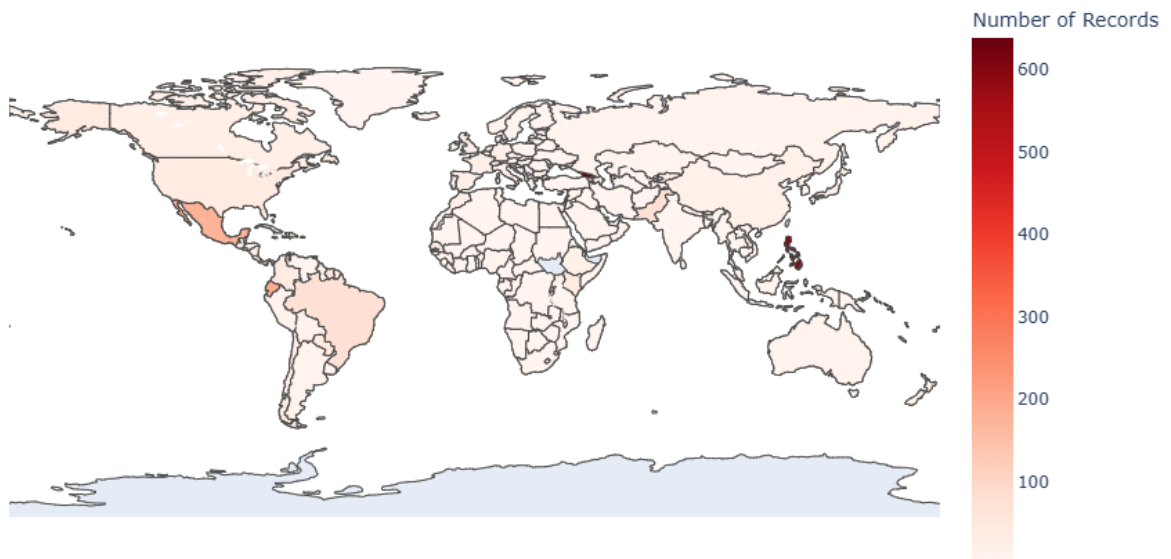

Figure 10: Remitscope and Kpodar Receiving Countries Map

Similar concentration patterns are observed in the cross-tabulation of the top 30 sending countries.

Top 30 Receiving Countries:

Figure 11: Top 30 Receiving Countries: Remitscope and Kpodar

4.2 Data Concentration

- **Top 10 receiving countries:**
 - Remitscope: 633 out of 728 records (87.0%)
 - Merged dataset: 2052 out of 3980 records (51.6%)
- **Top 10 sending countries:**
 - Remitscope: 133 out of 728 records (18.3%)
 - Merged dataset: 1700 out of 3980 records (42.7%)

4.3 Main Flows

Only Remitscope Data:

Global Remittance Network (12.csv): Top 50 Sending & Receiving Countries
Largest remittance flows and major players
